APP

Abstract Idea: An app that helps users discover and support local businesses

Connect with people in your locality

Allow the people in a locality to get detailed information regarding the companies around them. People will be able to know where to buy products in mass by recognizing the quantity and mass purchase perks offered by different businesses. Special offers during local festivals and weekends for a target population will help both people and entrepreneurs.

Connect with other local entrepreneurs

Provide a platform that allows a reach between people and entrepreneurs in a local community (can also go past local). Small entrepreneurs will find it easy to come in contact with raw materials or service or market place in their locality to build up their business.

Notion

The app will only bring perks to the community and people using it.

The app maintainers can keep the service running and also earn money by setting up ads and sharing specific user data that doesn't hurt their privacy.
